

CLAIMS

1. (Previously Presented) A dispenser for a hand covering, comprising:  
a housing to receive a roll of thin, flexible film having opposing side edges to be used as a hand covering;  
a form configured to be grasped by a user through the film such that the film temporarily clings to the user's hand; and  
a set of interlocking chains or opposing belts on either side of the housing to retain the side edges of the film as it moves through the dispenser for each use.

2. – 3. (Canceled)

4. (Original) The dispenser of claim 1, further including a cutter to cut the film into individual sheets.

5. (Original) The dispenser of claim 1, wherein:  
the form is connected to a pull-down mechanism that lifts a portion of the housing during use; and  
the weight of the housing falling back into position is responsible for resetting the dispenser for the next use thereof.

6. (Original) The dispenser of claim 1, further including a hand-shaped opening to assist a user in grasping the form.

7. (Previously Presented) A dispenser, comprising:  
a roll of thin, flexible film having opposing side edges and an adhesive surface to be used as a hand covering;  
a form configured to be grasped by a user through the film with the adhesive surface facing outwardly such that the film temporarily adheres to the user's hand; and

a set of interlocking chains or opposing belts on either side of the housing to retain the side edges of the film as it moves through the dispenser for each use.

8. – 9. (Canceled)

10. (Original) The dispenser of claim 7, further including a cutter to cut the film into individual sheets.

11. (Original) The dispenser of claim 7, wherein:  
the form is connected to a pull-down mechanism that lifts a portion of the housing during use; and  
the weight of the housing falling back into position is responsible for resetting the dispenser for the next use thereof.

12. (Original) The dispenser of claim 7, further including a hand-shaped opening to assist a user in grasping the form.
